

1. Turn day scene into a night scene on mouse click in Unity.

Step-by-Step Fix (Full Day → Night Effect)

Step 1: Create Two Skyboxes

1. Create Materials

- Right-click in Assets → **Create** → **Material**
- Name:
 - DaySkybox
 - NightSkybox

2. Change Shader

- Select material
- In Inspector → Shader:
 **Skybox** → **Procedural** (or 6-sided)

3. Adjust Settings

DaySkybox

- Tint: Light blue
- Exposure: ~1.3

NightSkybox

- Tint: Dark blue / black
- Exposure: ~0.2

Step 2: Assign Skybox via Script

Update your script:

```
using UnityEngine;
using UnityEngine.InputSystem;

public class DayNightToggle : MonoBehaviour
{
    public Light directionalLight;
```

```

[Header("Skyboxes")]
public Material daySkybox;
public Material nightSkybox;

[Header("Lighting")]
public Color dayColor = Color.white;
public float dayIntensity = 1.2f;

public Color nightColor = new Color(0.2f, 0.2f, 0.5f);
public float nightIntensity = 0.2f;

private bool isDay = true;

void Update()
{
    if (Mouse.current.leftButton.wasPressedThisFrame)
    {
        ToggleDayNight();
    }
}

void ToggleDayNight()
{
    if (isDay)
    {
        // 🌙 Night
        directionalLight.color = nightColor;
        directionalLight.intensity = nightIntensity;

        RenderSettings.skybox = nightSkybox;
        RenderSettings.ambientLight = new Color(0.05f, 0.05f, 0.1f);
    }
    else
    {
        // ☀ Day
        directionalLight.color = dayColor;
        directionalLight.intensity = dayIntensity;

        RenderSettings.skybox = daySkybox;
        RenderSettings.ambientLight = Color.white;
    }

    DynamicGI.UpdateEnvironment(); // IMPORTANT!
    isDay = !isDay;
}
}

```

📺 Step 3: Assign in Inspector

Select your script object:

- Drag:
 - DaySkybox → Day Skybox
 - NightSkybox → Night Skybox
 - Directional Light → Light field
